

Conceptual Self-Reflection #2

Name _____

Reflect and Respond, for yourself. If possible, respond visually, especially Prompt 3, but you may consider any combinations *of whatever format you wish* (text, other language, visual graphic art, etc.):

We are reaching an important second stage in your study of Calculus this week.

- 1) PROMPT 1 : Where is the effort you have invested here if it is not yet reflected in results, nor recognized by others?
- 2) PROMPT 2: What value, if any, do you sense in being able to incorporate visual arts-based tools in your first self-reflection. What was helpful? What would be more helpful? What was not helpful? etc.

Free write/ free draw? Other format?

- 3) Think of what impression you get as you look at what you earlier reflected upon and expressed last week in self-reflection #1. (e.g. some possible thoughts may be....was it honest, expressed to the full, expressed incompletely, expressed too little, expressed too much, expressed it the right way, expressed it truthfully, expressed it just right, want to express more or express less, etc.)

PROMPT3: What *companion piece* would you create to express a sequel to your first?

FYI: Here were last week's prompts:

- What sketch expresses the impression you have formed of key learning challenges you have faced here up to now? (limits, derivatives...) \OR
- What sketch expresses the ideal position you would like to hold as you face key learning challenges you have identified?
